

## Low maintenance accessible surfacing for indoor or outdoor recreational spaces

GT Impax Rubber Interlocking Tiles offer superior shock absorption, minimal maintenance, extended wear, and accessibility. The patented interlocking design helps ensure installation is precise as tiles will securely fit together to create a virtually seamless surface. Interlocking tiles are also perfect for indoor applications as there is no on-site mixing required. Order in one color or a variety to create simple designs like checkerboards.

Color options include pigmented, made from 100% recycled rubber with a colorized recycled rubber making up the top layer, as well as EPDM topped tiles, made from recycled and virgin rubber in a large variety of colors. EPDM tile can be ordered in a variety of color combinations to meet your site needs.

\*Interlocking tiles are resistant to lifting and shifting

### ✓ Tips

- Create design with multiple tile colors
- Routinely blow off debris to maintain surface
- Complete system of edges, corners, transitions, and ramps available
- Professional installation recommended

### Basic Specifications

- Available in varying thicknesses to meet critical fall heights up to 10 feet
- Various edging tile options are available, including ADA accessible ramp tiles and edges
- Although self-installation is possible, professional installation is recommended
- Recommended sub-base options: concrete or asphalt with suitable drainage
- Meets all applicable ASTM standards

### Benefits

- Highly accessible and inclusive
- Low maintenance, will not mold or mildew
- Easily repaired by replacing only damaged tiles
